WB description:

Western blot analysis of C/EBP epsilon (pT74) expression in Hela (A), mouse liver (B), Raw264.7 (C), rat liver (D) whole cell lysates.

IHC description:

Immunohistochemical analysis of C/EBP epsilon (pT74) staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

IF/ICC description:

Immunofluorescent analysis of C/EBP epsilon (pT74) staining in HeLa cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the pr
